Hoa Sen University (Respect Diversity)

About

Technical Lead and Fullstack Cloud Architect with 10+ years of experience engineering web applications, leading cloud-native migrations, and modernizing enterprise architectures. Specialized in bridging front-end systems with cloud infrastructure—leveraging architectural patterns (BFF, microservices), security protocols (FIDO biometric auth, JWT, OIDC), and automated DevOps pipelines.

◦ Technical Leadership: Led cross-functional Scrum teams delivering platforms for global clients including FUJIFILM, Hitachi Solutions, and the Singapore Ministry of Education.

◦ Cloud & Infrastructure: Microsoft Certified Azure Administrator experienced in IaC, containerized app deployments, application monitoring, and AWS serverless services.

◦ Frontend Architecture: Deep expertise in Vue 3 (Pinia, PrimeVue), as well as hands-on experience with React and .NET Core, with a proven history of modernizing legacy systems and reducing technical debt.

◦ AI-Assisted Workflow: Integrating GitHub Copilot and AI tooling into delivery cycles to accelerate technical analysis, implementation, and automated testing.

Experience

Senior IT Consulting & Implementation

Hitachi Digital — APAC

Jan 2026 - Present · 11 months

Ho Chi Minh City, Vietnam

★ Tech Lead:
◦ Desktop Publishing Platform (FUJIFILM - Japan): Acted as Technical Lead for modernizing desktop app (MakeReady) used in printing document customization, directing front-end architecture, parallel processing feature development, and foundation restructuring using ElectronJS, ReactJS, NestJS, and fabric.js.

★ Senior Engineer:
◦ Enterprise Document Automation (FUJIFILM - Japan): Engineered configurable multi-step pipeline features and Microsoft Teams notification integrations across a 50+ microservice cloud ecosystem (IWPro) using Node.js, AWS Lambda, SQS, and DocumentDB.
◦ ESG & Carbon Accounting Platform (Hitachi Solutions - Japan): Built a Vue 3/PrimeVue web client (EcoAssist) featuring raw utility-to-tCO2 conversion pipelines, Scope 1 & 2 compliance reporting, and carbon credit lifecycle tracking.

Senior Software Engineer

Orient Software Development Corp.

Sep 2020 - Dec 2025 · 5 years 4 months

Ho Chi Minh City, Vietnam

★ Tech Lead (Singapore Ministry of Education):
Led a Scrum team delivering the OPAL e-learning platform (CSL module), significantly boosting system reliability and stability by systematically resolving SSAT and SPT issues.

★ Senior Fullstack Developer (Conexus - Norway):
Modernized web products (Elevate, Engage, FollowUp) by implementing BFF architecture, JWT authentication, Vue.js/Pinia, .NET Core, and FIDO biometric authentication POCs.

★ DevOps Engineer (Conexus - Norway): Executed cloud migration from on-premise BaseFarm servers to Azure Cloud, establishing automated deployments, containerized app services, and IaC.
◦ Open-Source Project: Created an Azure Firewall Policy Optimizer tool to parse ARM template JSON, eliminating rule redundancy and simplifying cloud security management.
Github: https://github.com/nguyenviettung7691/azure-firewall-policy-optimizer

Senior Software Developer

Conexus

Jan 2018 - Aug 2020 · 2 years 8 months

Ho Chi Minh City, Vietnam

★ Tech Lead (Singapore Ministry of Education): Led a Scrum team building full-stack features for the OPAL e-learning platform (CSL module), improving product stability through targeted SSAT and SPT issue resolution.

★ Senior Frontend Developer (Conexus & Conexus SG - Norway): Modernized web client architectures by upgrading legacy libraries, building reusable web components, and refining client-side workflows for products including Conexus Companion and Coursepad.

Frontend Developer

Orient Software Development Corp.

Nov 2014 - Dec 2017 · 3 years 2 months

Ho Chi Minh City, Vietnam

★ Client: Conexus (Norway).
◦ Responsive Web Engineering: Built and maintained responsive web applications using ASP.NET MVC (Razor), jQuery, and LESS.
◦ Performance & UX Optimization: Ensured cross-browser compatibility, optimized asset bundling using Microsoft Optimization, and engineered modular JavaScript architectures alongside custom UI/UX graphics.

Fullstack Developer

F2Tech.Asia JSC

Oct 2013 - Oct 2014 · 1 year 1 month

Ho Chi Minh City, Vietnam

★ Employer: F2Tech.Asia (formerly VNYI) - Vietnam.
◦ Multi-Platform Product Engineering: Built core products across desktop (C# WinForms, DevExpress), web (ExtJS), and hybrid mobile platforms (Cordova, Telerik, Kendo UI).
◦ Database Optimization: Designed and maintained complex SQL Server stored procedures to ensure high data reliability and query performance.

Education

Hoa Sen University (Respect Diversity)

Bachelor's Degree · Information Technology · Good

2009 - 2014

◦ Specialized: Software Engineering.
◦ Graduation Project: Built a multi-platform coffee shop management system featuring a C# WPF desktop app, Windows Phone client, SQL Server backend, and SignalR for real-time sync.

Publications

The Frontend's Contract: Building Backends for Frontends

Devpath Traveler@Hashnode · March 21, 2026

A practitioner's guide to the BFF pattern — from architectural rationale to production-grade implementation. Covers when BFF earns its complexity, how to design a clean client-specific API layer, and what it takes to run it reliably on Azure. Stack: Vue 3 · .NET Core 8+ · Azure.

See publication

Passwordless: Modern Authentication Patterns for PWAs

Devpath Traveler@Hashnode · February 19, 2026

A practical deep dive into modern authentication for Progressive Web Apps. This series starts from principles — identity, trust, and user verification — and moves toward real-world passwordless systems powered by WebAuthn / FIDO2 and OpenID Connect.

See publication

Understanding Cron from First Principles to Production

Devpath Traveler@Hashnode · February 1, 2026

A practical series exploring cron from core concepts and architecture to real-world Yii & HumHub implementations, focusing on background jobs, queues, scheduling tradeoffs, and how time-based systems behave in production.

See publication

Designing a Microservice-Friendly Datahub

Devpath Traveler@Hashnode · January 11, 2026

A series on microservice-friendly Datahub architecture, covering event-driven principles, decoupling, diving in real-world implementation with Redis, RabbitMQ, REST API, and processor service showing distributed systems communicate at scale.

See publication

Containers, Actually: Building Real Local Dev Environments

Devpath Traveler@Hashnode · December 24, 2025

This series explores full-stack local development with Docker—from core concepts and best practices to a real Windows implementation. The goal is to understand how things run, why they work, and how to build reproducible production environment.

See publication

Web Authentication Demystified — From Concepts to Real-World

Devpath Traveler@Hashnode · December 16, 2025

This series breaks down modern web authentication, from core concepts like OAuth, OIDC, and tokens to real implementation details. You'll learn how the pieces fit together and see how a production-ready system is built and secured.

Projects

Conexus Elevate

Oct 2014 - Dec 2025

Client: Conexus (Norway)

Description: Provides kindergartens, schools, health centers and other services with a single solution to follow up on children and young people in a safe, efficient and systematic way. It brings together the entire follow-up work – from initial observation and concern to measures and evaluation – with the child at the center and the legislation as the framework.

Achievements:
- Contributed to web app products Elevate. Modernizing the tech stack and infrastructure. Implementing architect solution such as BFF (Backend for Frontend) and JWT authentication, integrating new frameworks (Vue.js, .NET Core, Pinia), managing Azure infrastructure code for service deployment, developing POCs like FIDO-based biometric authentication.
- Migrated the system infrastructure from on-premise BaseFarm servers to Azure Cloud, focusing on network security, automated deployments, and infrastructure-as-code. Managed containerized app services and monitored performance using Azure Application Insights.
- Designed and implemented responsive web applications using ASP.NET MVC (Razor), jQuery, and LESS. Focused on cross-device and cross-browser compatibility, efficient bundling with Microsoft Optimization.
- Upgrading front-end libraries such as Bootstrap, refining UI/UX with custom SVG-based

icons, building reusable web components.

Technical: JavaScript · jQuery · Bootstrap · LESS · ASP.NET MVC · Scalable Vector Graphics (SVG) · Azure · DevOps · .NET Core · SASS · Vue.js · JSON Web Token (JWT) · Pinia · FIDO · vite · Vuetify · GitHub Copilot

OPAL 2.0 (CSL)

Oct 2019 - Apr 2022

Client: Ministry of Education (Singapore)

Description:
MOE digital learning platform that advances the philosophy of Professional Development (PD) Ownership and Leadership. It is a digital learning platform for all MOE officers that is designed primarily for personalised and collaborative learning.

Achievements:
Collaborated with Conexus the Singapore Ministry of Education on the OPAL e-learning platform, focusing on the CSL (Collaborative and Social Learning) module. Led a small Scrum team, contributed as a full-stack developer, and improved platform reliability through systematic resolution of SSAT and SPT issues.

Technical: PHP · Yii · Humhub · JavaScript · jQuery · LESS · Bootstrap · Docker · DevOps · Redis · C# · AWS · MySQL · Elasticsearch · Jira
